

The following motions are being posted for discussion and vote during the October 6th IIPTF meeting.

MOTION 1

The settlement of inadvertent as the IIPTF was tasked will be broken down into four components. 1) Inadvertent energy hourly measurement 2) Frequency hourly measurement 3) Hourly valuation for inadvertent energy 4) Valuation for hourly frequency deviation. Valuations can be considered negative or non financial.

MOTION 2

The IIPTF task force recognizes that inadvertent energy and frequency deviation must be measured before it can be valued. However, the measurement of inadvertent energy and frequency deviation lies outside the scope of the IIPTF and will be a task reserved for NERC. The data received from NERC will be a sufficient measurement of inadvertent energy and frequency deviation until such time that technology allows this data to be more accurate.

MOTION 3

NERC has agreed to provide inadvertent energy and frequency deviation measurements that represent one hour increments and include all hours. This does not require measurements to be reported hourly for settlement. Reporting of measurements will be in such frequency as NERC deems practical. The IIPTF will recognize the limitation of monthly measurement reporting frequency until such time that technology and NERC allow this data to be reported more frequently.

MOTION 4

In an effort to arrive at a better method for the settlement of inadvertent, the IIPTF will consider only two basic methodologies. 1) Financial settlement for inadvertent 2) Physical settlement of inadvertent. That fact that inadvertent has at least two components, also allows for a combination of the above methodologies.
